2. Wings
3. Wing Spar
4. Vertical Fin
5. Horizontal
6. Scale Accessories
7. Elevator Spar / Hardware Bag

The MIG-17 comes with Twelve 12g Servos

CAUTION: When setting up and connecting the servos on your MIG-17 for the first time, be careful not to have the Flaps Binding, one example is to have the model resting on a stand and connecting power to the servos and have the Flap resting and blocking the Flaps in the down position. You will burn out the servos.

The Retract and Brake controller continue to evolve, so we are not going to spend too much time on them One servo lead goes out to your Receiver for the retracts, the controller will do all the timing of the gear and doors
